

To gain the maximum enjoyment from your pool means keeping it in tip top condition. This includes not only the water, pumps and filters but equally the surface finish of your pool. Being a valuable asset, looking after your pool will pay handsome dividends.

Letting it become run down and hard to keep clean means you will need to spend lots of money and time to bring it back to a sparkling condition. So keep your pool healthy no matter the season.

Pools come in all shapes and sizes and each one has its own story. Be they fibreglass, concrete, Marblesheen or Pebblecrete, the original surface will lose its new look over time and become in need of care and attention.

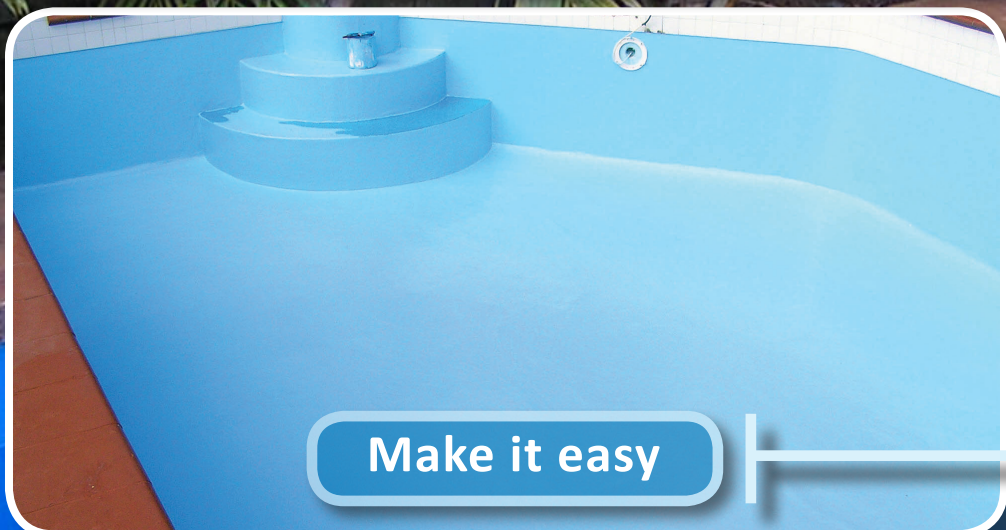

Don't sweat over your pool

EPOTEC is specially designed for use in pools (and Spas) 24/7. It's resistant to wear and tear, black spot, algae attack, fading, chemical attack, UV light and oxidation. It provides a "new" easy care surface. Being seamless, algae won't get a foot hold. EPOTEC will also protect the pool structure from attack by pool chemicals.

EPOTEC is being used Australasia wide to protect pools and spas, just like yours and has more than 25 years usage. EPOTEC is used widely in Olympic, Council, School and Community pools and 1000's of residential pools. It's even used in aggressive natural thermal pools in New Zealand, a really tough assignment.

EPOTEC is designed for pools and spas be they concrete, fibreglass, Marblesheen or Pebblecrete.

Make it easy

Be careful with epoxies. Most epoxies on the market are not designed for use in swimming pools and will fail after a few years as does Chlorinated Rubber, also called "Pool Paint". Use only EPOTEC epoxy which is specifically designed for pool and spa use. That way you will get a long lasting and proven coating.

EPOTEC comes in great range of colours to suit any location and we can develop colours just for you. You can create interesting patterns, images and motifs or logos so very easily.

EPOTEC is a hi build coating unlike other epoxies, meaning you get maximum thickness in just 2 coats and it will last as long as those paints requiring 3 or 4 coats to get the same durability. This saves you time and money during application. It provides a faster application process, very helpful when the weather is closing in.

In fact 2 coats of EPOTEC at the correct coverage rates will last on average 10 – 14 years in a domestic pool. Even in high wear commercial pools 5 – 7 years is common.

Recoating is straightforward after a decade or so. This is unlike fibreglass, Marblesheen, Pebblecrete or any of the newer mineral finishes. They all require skilled workman to undertake the repairs and often at great cost to you.

You can do it or someone else can

Your pool and you

To save you wasting hours looking after your pool, keep all aspects in good condition. Regular maintenance pays dividends. This includes looking after the internal surfaces. These areas need to be attractive, easy to clean and helping to give your pool that magic look.

Any surfaces that are worn, crumbling, split, dirty, stained, or just plain tired will not do.

Help is at hand and its excellent value. By upgrading the existing surface of your pool with EPOTEC you will have an easy clean, attractive, long lasting finish. An EPOTEC finish invites you and your family to dive in anytime.

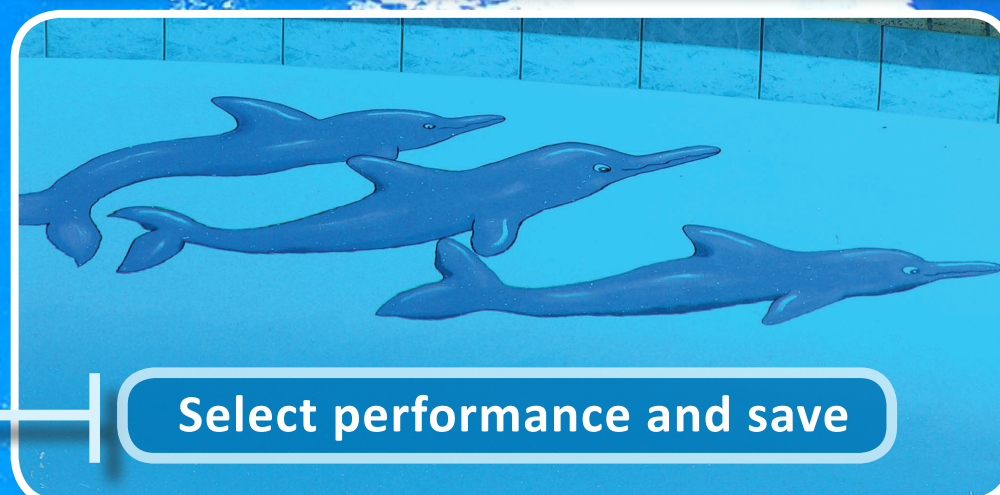

Protection your pool deserves

For a low maintenance pool (or spa), always go for a smooth, easy clean finish. EPOTEC provides a seamless finish even when brushed or rolled on. NO need to spray it.

Surfaces that have pebbles or minerals usually have a rough surface which can be hard on children's skin, catch dirt and body fats. Dirt and fats become lodged into little crevices and start an "algae garden". That's why commercial pool operators go for smooth surfaces. They know how to reduce maintenance costs. Even tiles can be an issue as the grout gets dirty and makes the pool unattractive.

With the seamless EPOTEC finish nothing tends to stick to it or to start growing. To gain the maximum time enjoying your pool and the minimum time maintaining it, go EPOTEC every time. You'll be glad you did and your neighbours will envy you, relaxing not cleaning.

Select performance and save

In fact any one can (re) apply EPOTEC. Many pool owners undertake the preparation and application of EPOTEC and have great results. An effort they are justifiably proud of. We support them all the way and will support you to, should you like to do it yourself (DIY).

We also offer to work with your favourite painter or with our Approved Applicators

EPOTEC is the only epoxy we know of in Australia that offers a written warranty for up to 5 years. What more can one say about a proven coating.

Choose wisely and relax for years.

EPOTEC has been widely used in pools and spas for more than 25 years.... so when you choose EPOTEC you are choosing wisely.
